1. DESCRIPTION: NETWORK AND RANGE SUPPORT PREPARATION

GSFC requires the Preliminary Mission Terminal Countdown support count. The count support is to be sent to GSFC GCEN/450. This office requires the preliminary support count to support timely preparation of the Network and Range Countdown 14 working days prior to Launch.

Comment: If no network simulation is scheduled then no preliminary count is required. This change defines a point prior to launch for delivery of the preliminary countdown.

TEST CODE: EAFB PREFLT STSALL

1. DESCRIPTION: PREFLIGHT VERIFICATION SUPPORT
(GN/SN/DFRC/RTS)

Prior to mission support, each station is required to support command, telemetry, metric data, verification where the following cases or conditions apply:

1. Significant hardware, software or configuration changes have occurred (including communications links with the stations).
2. Support requirement changes or unique payload requirements exist.
3. Missions are separated by an extensive period of time.

These tests are documented in 450-NOSP Space Shuttle AFSCN Annex/Air Force Satellite Control Network Annex to the NOSP for the Space Shuttle Program.

NOTE: 1.MILA is required to support TV verification testing with GSFC in parallel with JSC validation testing in accordance with the guidelines documented in the JSC Validation Testing Manual.

2.NHS, TCS, and DGS are required for ascent recorder dumps and potential real-time 2-way support. DGS is required for deorbit prep support in the event of a loss of TDS (JSC would required DGS to be a 2-way support site). DGS, HTS, and GTS are required for post K-band stow recorder dumps.

1. DESCRIPTION: C-BAND BARRIER SCAN & HIT PROCESSING REQUIREMENTS

For EAFB landings, DOD is required to provide "Barrier Scan and Hit Processing capability at the PTP FPQ-6, VDB TPQ-18 and HAIR radars to ensure maximum probability of skin track data acquisition at a target elevation of 1 degree in clear weather or 3 degrees in rain, and with the dispersed landing trajectories shown on pages following this page. After either the PTP FPQ-6, VDB TPQ-18 or HAIR radar has acquired the Orbiter, DOD is to provide real-time acquisition data to other (VDB, PTP, and AFFTC/DFRC) radars. The real-time acquisition data are to be derived from the on-track radar's tracking data. The initial acquisition point(s) about which the radar(s) are to scan is to be

1. DESCRIPTION: NISN OVERVIEW

The primary responsibility of NASA Intergraded Services (NISN) is to
interconnect overseas and domestic tracking and telemetry stations and
sites, launch areas, mission and project/payload operations control
centers, science data capture facilities, and network control centers
in the transporting of spacecraft telemetry data, air-to-ground
voice and video for command, control, tracking, orbit determination,
and data acquisition. In order to meet these responsibilities the
following circuit provisioning lead times have been established to
assist in the planning process for NISN services. These are
"GUIDELINE" statements only, as all requirements will not have the
same lead times.

Lead Time Type Service

1. DESCRIPTION: GN AIR-TO-GROUND VERIFICATION TESTING

Prior to each mission, applicable stations are required to support A/G verification testing in the following manner:

1. Throughput/ Modified Throughput stations configure for keying and modulation on UHF A/G.
2. Maintain a capability to send and receive simulated audio tones through the system and measure audio frequencies during the testing process.
3. Confirm proper operation of the UHF systems when interfaced with the GSFC NIC.

NOTE: WSSH UHF shall support Launch day AOA/PLS, Landing minus one day checkout, and when WSSH is activated for Landing (EOM, EOM+1, EOM+2, etc.).

STSALL TVPLAN

1. DESCRIPTION: TELEVISION TRANSPONDER SUPPORT FOR SHUTTLE FLIGHTS

Control and scheduling of Satellite AMC-6 Transponder 5 is a function of NISN. During Shuttle flights, operational control of these transponders is delegated to Houston TV who acts on behalf of the Flight Director.

General use of this transponders is as follows:

LAUNCH

Transponder 5 - video from KSC to support operational needs of the Marshall ICE Team, JSC MER, HQ and Boeing Tower II(know as the ICE and MER channel). The Michoud Assembly Facility (MAF) and Thiokol Launch Systems in Utah also require access to the ICE and MER video in support of the Marshall ICE Team. These locations have procured their own video receipt systems and have agreed to take full installation and maintenance responsibilities for these systems.

NOTE: Boeing Tower II purchased equipment to receive the ICE/MER channel: 2 Wegencer Unity 4650 IRD/with digital board (SDI, Genlock)
1 Wegencer Unity 500 IRD rack-mount version
1 Quintech LS4 2150a 4-way active L band splitter

1. DESCRIPTION: DSMC NETWORK SCHEDULING

SN Resource

The planning week for forecast scheduling begins on the Monday, 21 days prior to the existing real-time week. Mission support and critical times for SSP should be coordinated with forecast scheduling during this week. All requests for support that are received by 1200Z the following Monday, 14 days prior to the real-time week, will be scheduled by priority. Mission support for SSP by the SN shall be requested in the form of Schedule Add Requests (SAR's) transmitted via high speed data messages from JSC to the DSMC. Changes, in the form of adds and deletes, will be utilized to accommodate schedules start/stop time differences between nominal pre-mission forecasted schedules and actual lift off time and trajectory changes. Other centers having requirements involving SN support of the SSP must coordinate their support requirements with JSC.

1. A circuit of 64 kbps between the DSMC and the MCC shall be provided for TDRSS scheduling messages. This interface shall be full duplex and shall be shared between the ISS and SSP Programs.
2. A NISN Mission Critical service is required.
3. The interface shall provide security appropriate for "Space Operations Information".
4. Refer to the JSC MCC to SN NCCDS Operational Communications ICD for MCC Systems (JSC 11534 Volume XVI, latest revision) for detailed interface specifications.
